

# EE-371 Control System Laboratory Manual

## Contents

<a href="#"><u>Software Installation</u></a>	i
<a href="#"><u>Introduction to Real-Time Control</u></a>	1
<a href="#"><u>Introduction To Data Acquisition and Real-Time Control</u></a>	1.1
<a href="#"><u>Op-amp, A/D-D/A converters and Compensator Emulation</u></a>	2.1
<a href="#"><u>State variable modeling and Intro to MATLAB Control System Toolbox</u></a>	3.1
<a href="#"><u>Tutorial I Basics of State Variable Modeling</u></a>	3A.1
<a href="#"><u>Tutorial II MATLAB Functions for Modeling and Time-domain Analysis</u></a>	3B.1
<a href="#"><u>Digital Simulation Case Studies</u></a>	4.1
<a href="#"><u>Position Control I (Rate Feedback)</u></a>	5.1
<a href="#"><u>Velocity Control I (Velocity Feedback)</u></a>	6.1
<a href="#"><u>Position Control II (PD Controller- Root Locus Design)</u></a>	7.1
<a href="#"><u>Tutorial III Root Locus Design and rldesigngui</u></a>	7A.1
<a href="#"><u>MATLAB Control System Toolbox SISO Design</u></a>	7B.1
<a href="#"><u>Position Control III (Phase-lead Controller - Root locus Design)</u></a>	8.1
<a href="#"><u>Ball and Beam Project</u></a>	9.1

## Acknowledgment

I would like to acknowledge and thank my colleagues Dr. John Brauer and Dr. Steve Williams for error-checking the manual and for their constructive comments and suggestions.

Dr. H. Saadat
